Complete Left: April 20, 1925.

Complete Accepted: Oct. 20, 1925.

PROVISIONAL SPECIFICATION.

Improvements in or relating to Pads for Suede Leather Goods.

I, HANS HANSEN, of 1, Tower Street, Hackney, London, E. 8, a British subject, do hereby declare the nature of this invention to be as follows:—

5 This invention has for its object to provide pads for brushing and/or smoothing the surface of suede leather goods.

A pad, according to the invention, consists in a rubber pad of soft rubber sponge
10 having very small cells, which pad is secured by known means to a stock or back of the usual description.

The back may for instance fit the out-

line of the rubber pad or it may be provided with a handle, or it may be of a
15 shape similar to the back of a nail polisher.

The rubber pad may also be secured to the stock or back of a known wire brush, for brushing leather or for applying dry
20 or liquid dressing.

Dated this 20th day of June, 1924.

REGINALD W. BARKER & Co.,

Applicant's Agents,

COMPLETE SPECIFICATION.

Improvements in or relating to Pads for Suede Leather Goods.

I, HANS HANSEN, of 9, Aldersgate Buildings, Aldersgate Street, London, E.C. 1, late of 1, Tower Street, Hackney, London, E. 8, a British subject, do hereby
30 by declare the nature of this invention and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement:—

35 This invention has for its object to provide pads for smoothing the surface of suede leather goods or articles of other leather, felt or other material including felt or straw or silk hats. In addition
40 to its use for brushing such surfaces the implement is also suitable for the purpose of applying dry or liquid dressing thereto.

While it is known to fit a pad to the
45 back of a brush the pad according to the present invention is made of a soft spongy rubber, having very small cells, which pad is secured, by means of an adhesive to the back of a brush, preferably
50 made of fine wire.

I am aware that arrangements whereby sponge rubber pads are fitted to a solid backing have been proposed for other pur-

poses and do not, therefore, claim this as a feature of my invention. 55

The accompanying drawing illustrates a rubber pad mounted back to back on the stock of a fine wire brush formed with a long handle.

The rubber pad A is secured to the
60 handled stock B of the brush C by means of suitable adhesive.

Having now particularly described and ascertained the nature of my said invention and in what manner the same is
65 to be performed, I declare that what I claim is:—

A pad for smoothing the surface of suede leather goods or articles of other leather, felt or other material including
70 felt, or straw or silk hats, consisting of a rubber sponge pad having very small cells mounted on the stock of a brush by adhesive in the manner herein described and shown in the accompany-
75 ing drawing.

Dated this 20th day of April, 1925.
